

WWA 5.1.1 Release Note

February 20, 2002

- WWA Enhancements
 - Generate VTEC Event Tracking Numbers (ETN) within warnGen in backup mode .
 - Added "delete" button to the WWA Monitor that allows sites to remove incorrect entries from the WWA database
 - Added "Short Term Forecast" button to the WWA Monitor that allows sites to filter the short term forecasts.
 - Upon receipt of a proposed product the WWA software will generate a text product. Sites can then use the Alarm/Alert function on the text workstations to alarm on the storage of this product.
 - Forecasters will now be able to type times into the time fields in the WWA Composer.
- Corrected code deficiencies
 - WWA NWR: Replacement of products on NWR fails with multiple towers
 - WWA GUI crashes in certain scenarios
 - Hazard injected incorrectly in ZFP and SAF products when W/W/As from other sites exist
 - In certain cases, WWA headlines contain times with lower case characters
 - Hazards incorrectly formatted within AFD when W/W/As from other sites exist
 - Expired products not purged from WWA database
 - NWR WWA products are not created for hazards from adjacent offices
 - Time phrases within NWR WWA products are shifted
 - Product Ids within WWA products are incorrect
